**Project:**

**Tex Tral Masonry Cleaner**

**Product information:**

We propose to furnish our Tex Tral Light Colored Masonry & Stone Cleaner for your project.

**Tex Tral is the recommended cleaner for all Spectrum Colored Cements.**

Tex Tral is designed specifically for light colored or sensitive colored masonry units and stone. It softens and removes excess mortar and dirt while effectively controlling green vanadium and brown manganese staining on color sensitive tile and brick. Tex Tral has also shown to be safe for cleaning most cast or unpolished stone. This cleaner has been used with great results on countless commercial and residential masonry projects throughout this region.

When to clean: Mortar must harden prior to cleaning. It is generally best to schedule cleaning at least seven days after brickwork is completed and normally within 14-28 days of installation. After one month, mortar smears and splatters left on brickwork become increasingly difficult to remove. If high strength mortars are specified on this project, this prompt cleaning is especially important.

As with all of the products in the Tex Clean family, you should carefully read and follow the instructions on the label and the Safety Data Sheet to insure its safe and effective use. Should you need samples of this product, Safety Data Sheets, or if we may be of service to you in any way, please let us know.

**Thank you for the opportunity of furnishing this  
quality product on your important project!**
