Subject: Submittal for approval

Project:

Tex Clean Plus Masonry Cleaner

Product information:

We propose to furnish our Tex Clean Plus Masonry Cleaner that we have been manufacturing & supplying since 1986. Tex Clean Plus, a masonry lime solvent, is specifically designed for the cleaning of dark colored brick and masonry surfaces. This product has proven to be effective for removing excess mortar and dirt without affecting the richness of the color found in darker bricks. Tex Clean Plus has been used with great results on countless commercial and residential masonry projects throughout this region.

When to clean: Mortar must harden prior to cleaning. It is generally best to schedule cleaning at least seven days after brickwork is completed and normally within 14-28 days of installation. After one month, mortar smears and splatters left on brickwork become increasingly difficult to remove. If high strength mortars are specified on this project, this prompt cleaning is especially important.

As with all of the products in the Tex Clean family, you should carefully read and follow the instructions on the label and the Safety Data Sheet to insure its safe and effective use. Should you need samples of this product, Safety Data Sheets, or if we may be of service to you in any way, please let us know.

**Thank you for the opportunity of furnishing this
quality product on your important project!**
